Subject: Discovery

Hello. My name is Wayne Owen. I'd like to introduce to you the biggest discovery in U.S. history. Located in Southern Oregon, an underlying plume of hydrogenated carbon fullerene's, containing ultra-dense hydrogen, (AKA Rydberg hydrogen) and noble gases, neon, helium 3 and 4, and argon. Also, hydrocarbons, methane, ethane, etc.

The reason this is such a huge discovery is that scientist's from Sweden have developed a process to laser excite ultra-dense hydrogen to create nuclear fusion, without deadly gamma radiation.

I'd love to share more with you regarding this discovery. Hoping to hear from you.

Best Wishes,

Wayne
